

HANDLE ASSEMBLY

STEP 1

Undo the screws and washers from the bottom of the handles.

Slide the handle ends through the holes in the hopper (*Diagram A*) and push firmly down until they hit the fixing lugs at the bottom of the hopper (*Diagram B*).

STEP 2

Gently tilt the hopper onto its front so you can access the underside of the handles (*Diagram C*)

STEP 3

Pull the handles in line with the holes on the fixing lugs and insert the screw and washer into the handles and tighten until finger tight.

To finish, using a 13mm spanner firmly tighten the screw into the handle until secure. Return the hopper to the upright position to check they are properly tightened.
